

Farmsuta Soil Sodhak 84

Description

Farmsuta Soil Sodhak-84 is a high-nutrient soil conditioner granule that provides complete nutrition to crops/plants. Farmsuta Soil Sodhak-84 is a silica-based formation. The fine particle size of the Silica base helps to dissolve easily when it comes in contact with soil moisture. The nutrients are made available quickly available to the plants. It performs well in even low moisture, ensuring optimal feeding for a longer time with good nutrient use efficiency. Uniform round shape granules are freeflow and dust-free, which helps in easy mixing and application with other chemical fertilizers, manually as well as mechanically. This improves fertilizer uptake & use efficiency.

The uses and benefits of Soil Sodhak-84 are:

1. **Soil Amendment:** It helps improve soil structure by increasing aeration and water retention. It also prevents soil compaction, allowing better root growth and nutrient uptake by plants.
2. **Nutrient Delivery:** It acts as a carrier for micronutrients and fertilizers, ensuring their slow release into the soil. This helps in sustained nutrient availability to plants, promoting healthy growth.
3. **Pest and Disease Management:** Soil Sodhak-84 enhances plant defense mechanisms against pests and diseases. They create a physical barrier on the plant surface, making it harder for pests to feed and reducing the likelihood of fungal infections.
4. **Stress Resistance:** Silica strengthens plant cell walls, making them more resistant to environmental stresses such as drought, heat, and cold. This results in improved plant vigor and resilience.
5. **pH Regulation:** Silica can help buffer soil pH, keeping it within the optimal range for plant growth. This is especially beneficial in acidic soils where silica can help neutralize acidity.

Dosage: 10 - 15 gm per 15 litre of water

Packaging Size: 1 kg | 2 kg | 5 kg

Date Created

January 20, 2025
